

Figure 1 consists of two circular diagrams, one for 'All' respondents and one for 'Non-respondents'. Each diagram is divided into segments representing age groups: 18, 19-24, 25-34, 35-44, 45-54, 55-64, 65-74, and 75+. The segments are shaded in different patterns to represent the percentage of respondents in each age group. The 'All' diagram shows a distribution where the 18-24 group is the largest, followed by 25-34, and then 35-44. The 'Non-respondents' diagram shows a similar distribution, with the 18-24 group being the largest, followed by 25-34, and then 35-44.
